

EXPECTATIONS:

## Fabric Pest Treatment

**Dear Valued Client,**

*Thank you for entrusting **HORIZON PEST CONTROL** to address your **FABRIC PEST INFESTATION**. To help ensure success and set clear expectations, please review the information below.*

### **YOU MAY STILL SEE MOTHS FOR A LITTLE WHILE**

- It's normal to see a few adult moths flying around for the first **2-4 weeks**.
- These are moths that were already in the life cycle before treatment.

### **EGGS & LARVAE TAKE TIME TO BREAK DOWN**

- The treatment stops new larvae from developing, but recently laid eggs may still hatch in the coming weeks
- Some damage may still occur if larvae were already inside affected items.
- Don't place items back into drawers/closets until applications have dried, and you have cleaned and inspected clothing for left over eggs or moths that may be hiding.
- Larvae in the pupa stage will not be effected until after they emerge and make contact with the application made to the affected areas.

## ***VACUUMING IS VERY IMPORTANT***

- Regular vacuuming will remove dead insects, eggs, and moth debris.
- Empty the vacuum bag or canister outside right after use.

## ***YOU MAY NOTICE ODORS***

- A light chemical smell or “musty” odor may be present for a short time.
- This fades within a few hours to a couple of days depending on ventilation.

## ***DAMAGED ITEMS WILL NOT BE REPAIRED BY TREATMENT***

- The moths may have already caused holes or thinning in fabrics.
- Treatment aims to prevent future damage but does not reverse what’s already happened.
- Items in storage or in containers will not be effected by any applications, and moths can still be present after treatments in unaffected areas.
- The most common sources for fabric pests include natural fibers which can be found in areas like rugs, clothing, fur coats, furniture, wall coverings like wallpaper or tapestries.
- Failure to take the appropriate precautions outlined in the prep sheet may lead to additional services or service failure.

## ***FOLLOW-UP MAY BE NEEDED***

- Depending on the level of infestation, after your initial services, additional services may be required.
- Keeping clothes stored properly and dry-cleaned helps prevent reinfestation.

We appreciate your cooperation and commitment to the process.

For any questions or concerns, please contact our office at **201-447-2530**.

***Thank you for choosing HORIZON PEST CONTROL.***
